

Bird Feeder Help Guide

Bird feeding is a wonderful way to welcome nature into your garden but it's important to note that feeding the following food to wild birds is dangerous to them:

Salty food - This can dehydrate them.

Vegetable, Chicken or Turkey fat - This can stick to birds feathers and prevent them from flying or preening.

Milk - Can cause severe stomach upsets (although a small amount of cheese is fine).

Dessicated coconut - This can cause stomach swelling and other problems.

Mould food - This causes respiratory problems.

Stale Food - This can encourage the Salmonella Virus.

Bird Cake Kit Guide

1. Mix your selected foods.
2. Melt the suet in a saucepan. Leave to cool slightly then pour into the bowl of mixed ingredients. Use around one third suet to two thirds mixed ingredients. Stir well.
3. Using the feeder/mould scoop up some of the mix and press into the mould using a spoon. Then leave in fridge for about an hour to firm up. If you are making more than one portion use the mould to form the cake shape, then knock out of the mould and leave on a tray. The mix should hold its shape.
4. Hang up in the garden and watch your needy neighbours enjoy.

It's fun trying different waste bird in your Bird Feeder. If you make a surprising discovery, please email support@circularandco.com with your findings and a picture if you can get one!

We love hearing all the successful waste foods people have tried. Some examples are: Christmas Cake, Roast Potatoes, Fruits, Pastry, Bread, Malt Loaf, Apple Crumble and oranges.
