

## Hidden Fixings - instructions

Hidden fixings work by securing the sign to a wall or fence using small metal bars. The bars are fixed to both the sign and the wall or fence via glue.

**Step 1:** You first need to mark the hole positions into your wall or fence. Push the metal bars into the pre-drilled holes on the sign, then offer the sign up to the wall or fence and mark off the whole positions.

**Step 2:** Drill the 2 or 4 holes into the wall or fence.

**Step 3:** Glue the 2 or 4 wholes into the sign by using the pre-drilled holes using half the epoxy pack provided. Wait for 1 hour for the glue to set. Then repeat by gluing the assembled sign to the holes in the wall or fence.
